Preface	7
Overview	8
1 What is a group?	9
1.1 A famous toy	9
1.2 Considering the cube	9
1.3 The study of symmetry	11
1.4 Rules of a group	12
1.5 Exercises	13
2 What do groups look like?	17
2.1 Mapmaking	17
2.2 A not-so-famous toy	20
2.3 Mapping a group	22
2.4 Cayley diagrams	25
2.5 A touch more abstract	26
2.6 Exercises	28
3 Why study groups?	33
3.1 Groups of symmetries	33
3.2 Groups of actions	44
3.3 Groups everywhere	47
3.4 Exercises	48
4 Algebra at last	53
4.1 Where have all the actions gone?	53
4.2 Combine, combine, combine	55
4.3 Multiplication tables	57
4.4 The classic definition	59
4.5 Exercises	64
5 Five families	77
5.1 Cyclic groups	78
5.2 Abelian groups	83
5.3 Dihedral groups	87

5.4	Symmetric and alternating groups	94
5.5	Exercises	103
6	Subgroups	117
6.1	What multiplication tables say about Cayley diagrams	117
6.2	Seeing subgroups	119
6.3	Revealing subgroups	120
6.4	Cosets	122
6.5	Lagrange's theorem	126
6.6	Exercises	129
7	Products and quotients	139
7.1	The direct product	139
7.2	Semidirect products	152
7.3	Normal subgroups and quotients	157
7.4	Normalizers	166
7.5	Conjugacy	170
7.6	Exercises	174
8	The power of homomorphisms	185
8.1	Embeddings and quotient maps	185
8.2	The Fundamental Homomorphism Theorem	197
8.3	Modular arithmetic	198
8.4	Direct products and relatively prime numbers	203
8.5	The Fundamental Theorem of Abelian Groups	205
8.6	Semidirect products revisited	206
8.7	Exercises	209
9	Sylow theory	225
9.1	Group actions	227
9.2	Approaching Sylow: Cauchy's Theorem	233
9.3	p -groups	239
9.4	Sylow Theorems	241
9.5	Exercises	253
10	Galois theory	259
10.1	The big question	259
10.2	More big questions	263
10.3	Visualizing Field Extensions	267
10.4	Irreducible Polynomials	270
10.5	Galois groups	272
10.6	The Heart of Galois Theory	283
10.7	Unsolvability	285
10.8	Exercises	292
